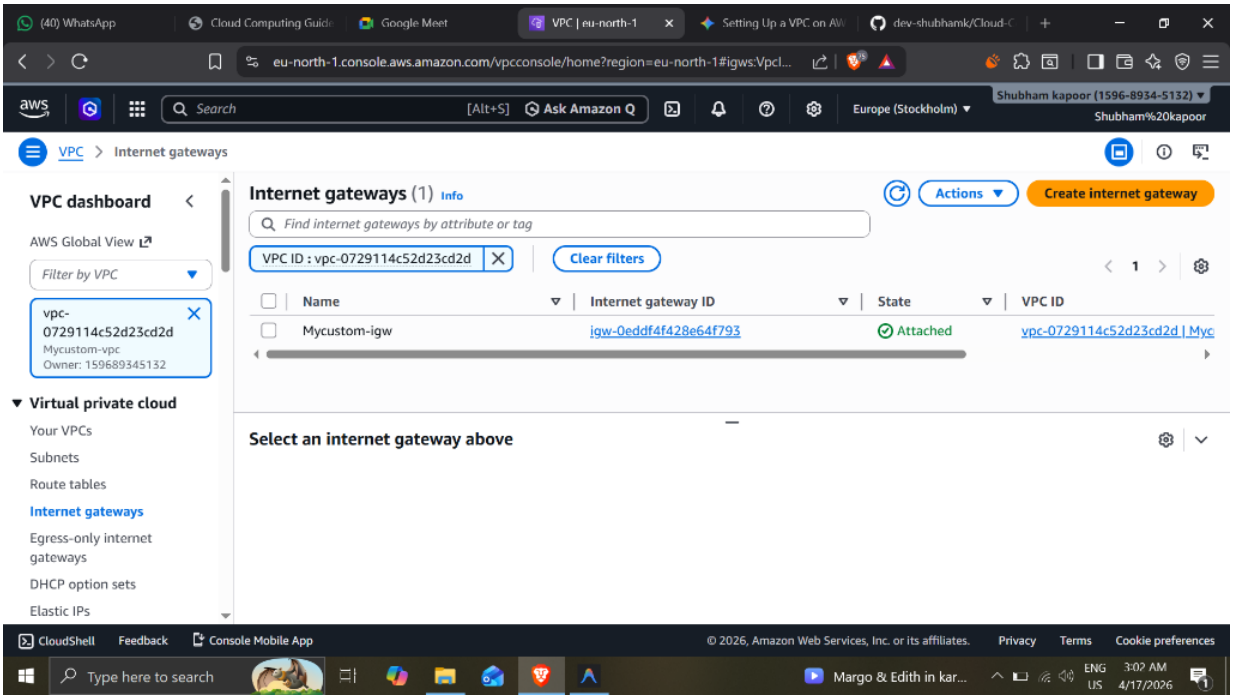
Virtual Private Cloud (VPC) Setup

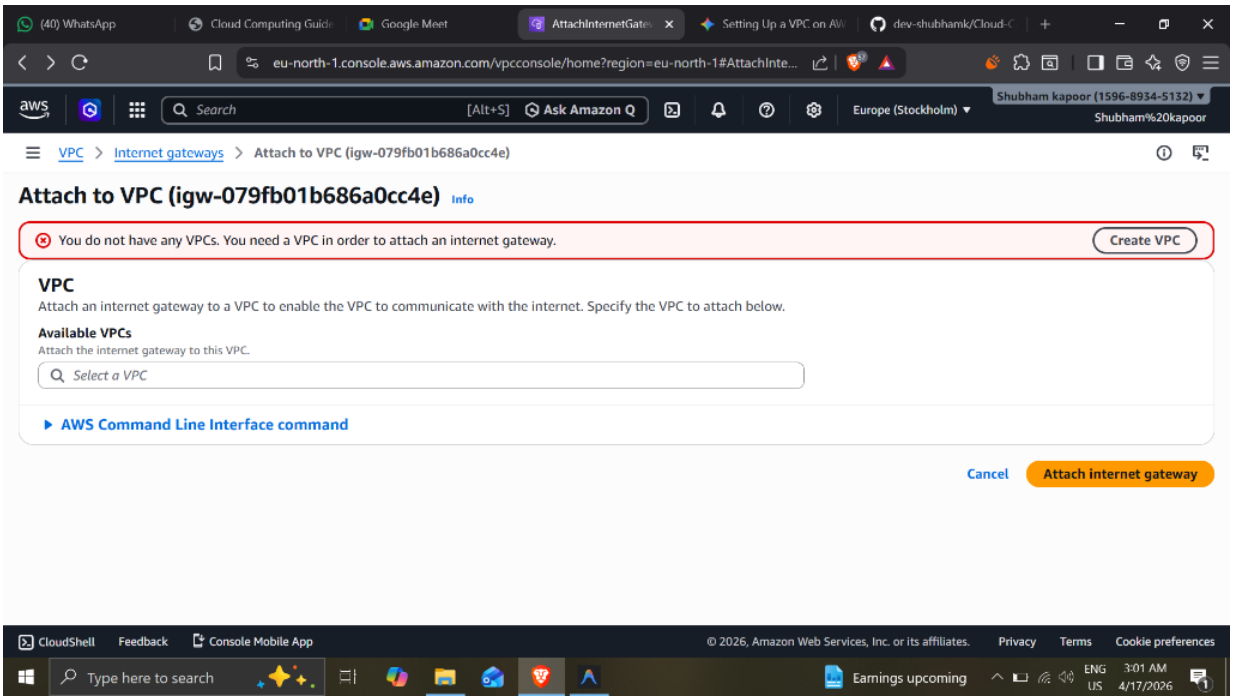
Step 1: Provisioning the VPC

Configured the custom Virtual Private Cloud providing a private isolated network.



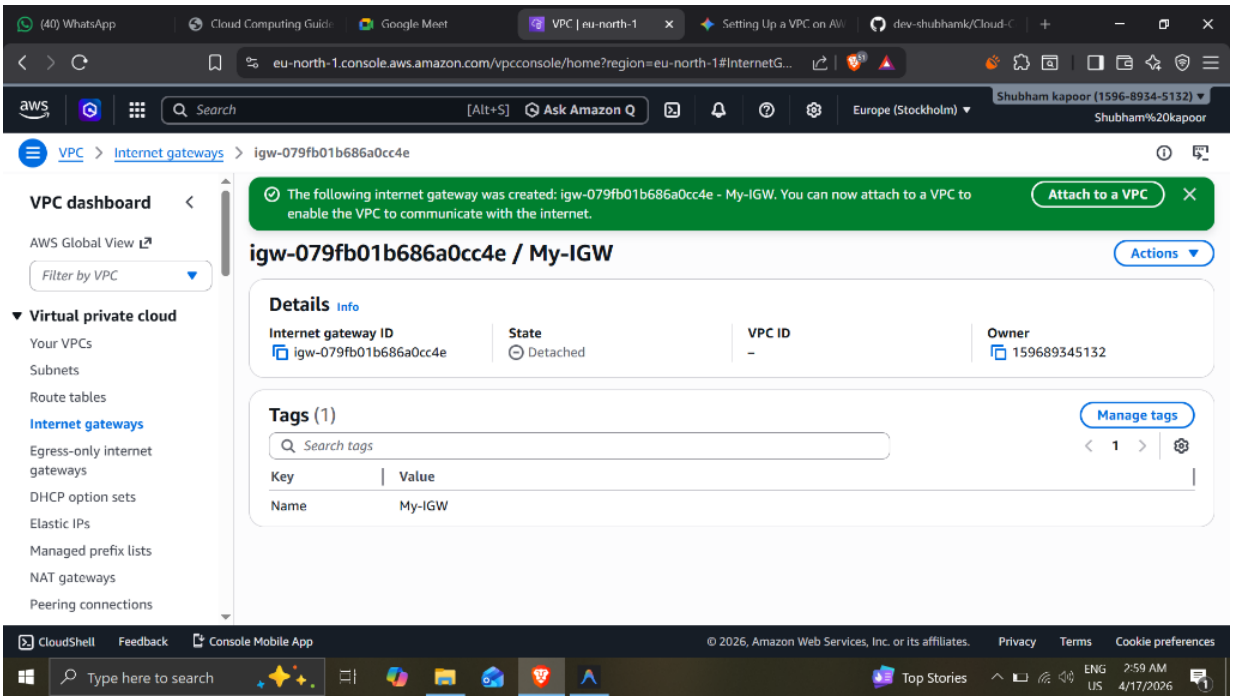
Step 2: Creating Subnets

Created the required subnets within the VPC for hosting resources.



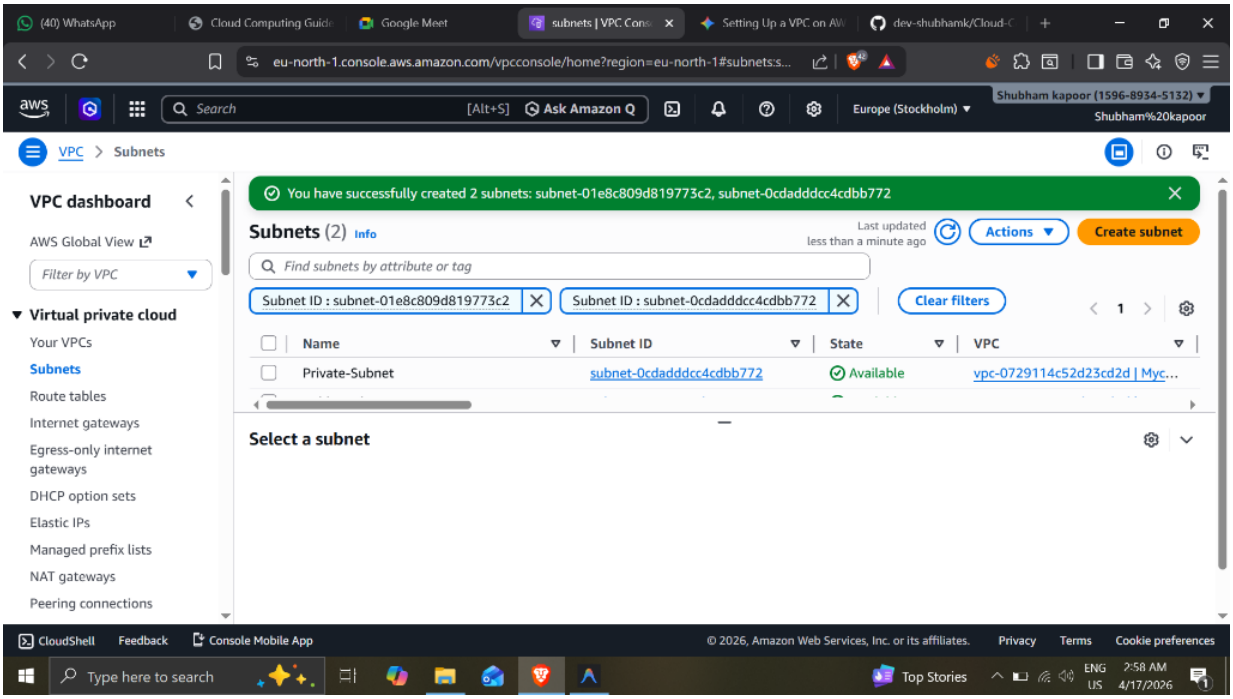
Step 3: Initializing the Internet Gateway (IGW)

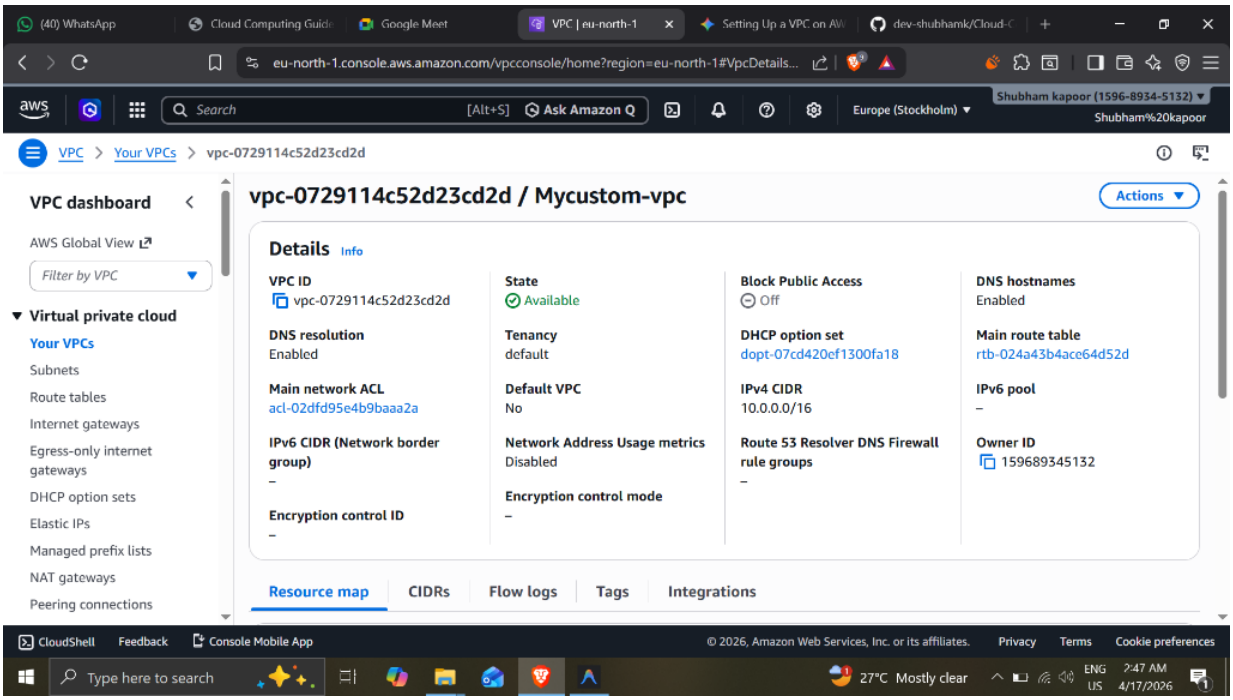
Generated an Internet Gateway to allow external internet access to the VPC.



Step 4: Attaching IGW to VPC (Resolving Attachment Errors)

Attempted to attach the IGW. Checked for attachment requirements and resolved any VPC visibility issues.



Step 5: Finalizing IGW Attachment to VPC


Successfully attached the Internet Gateway to the target custom VPC.
