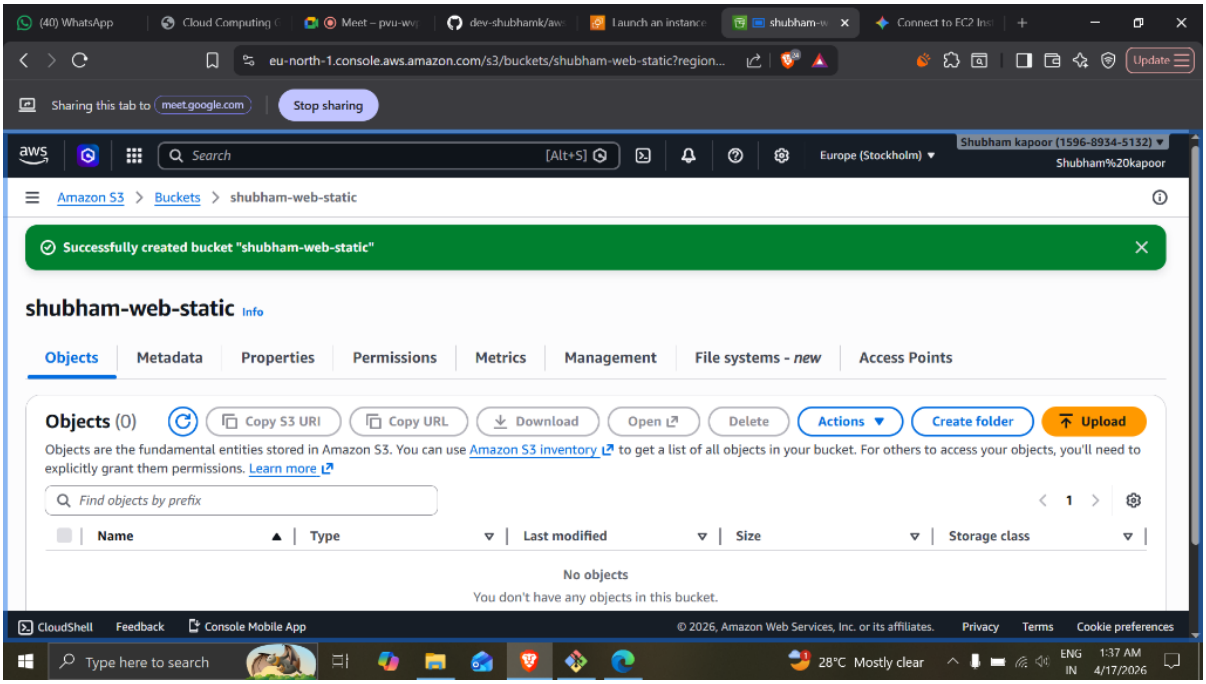
Static Website Hosting Practical

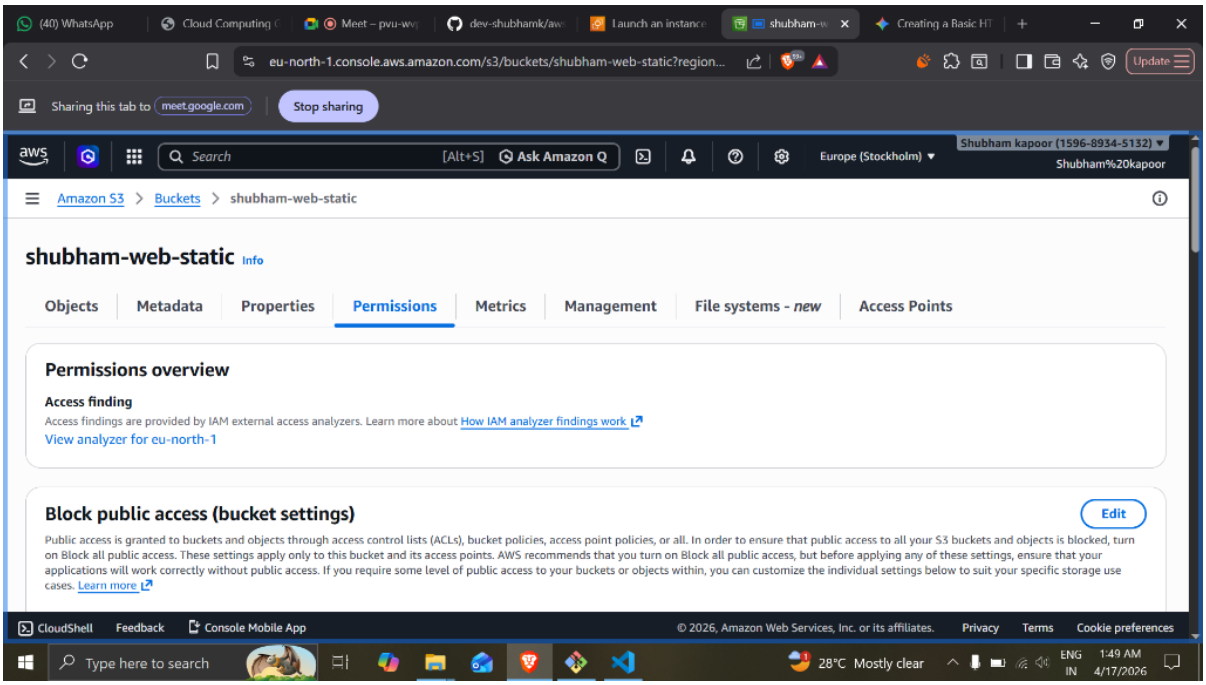
Step 1: Amazon S3 Bucket Creation

Successfully created an S3 bucket named "shubham-web-static".



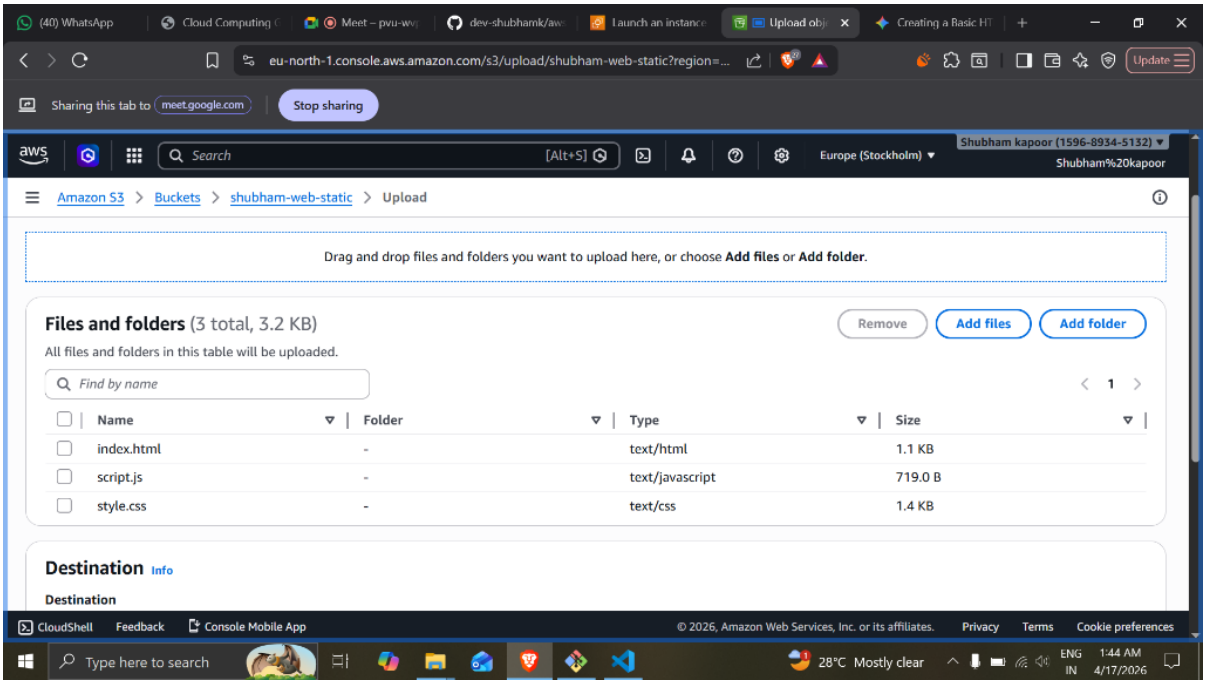
Step 2: Bucket Properties Configuration

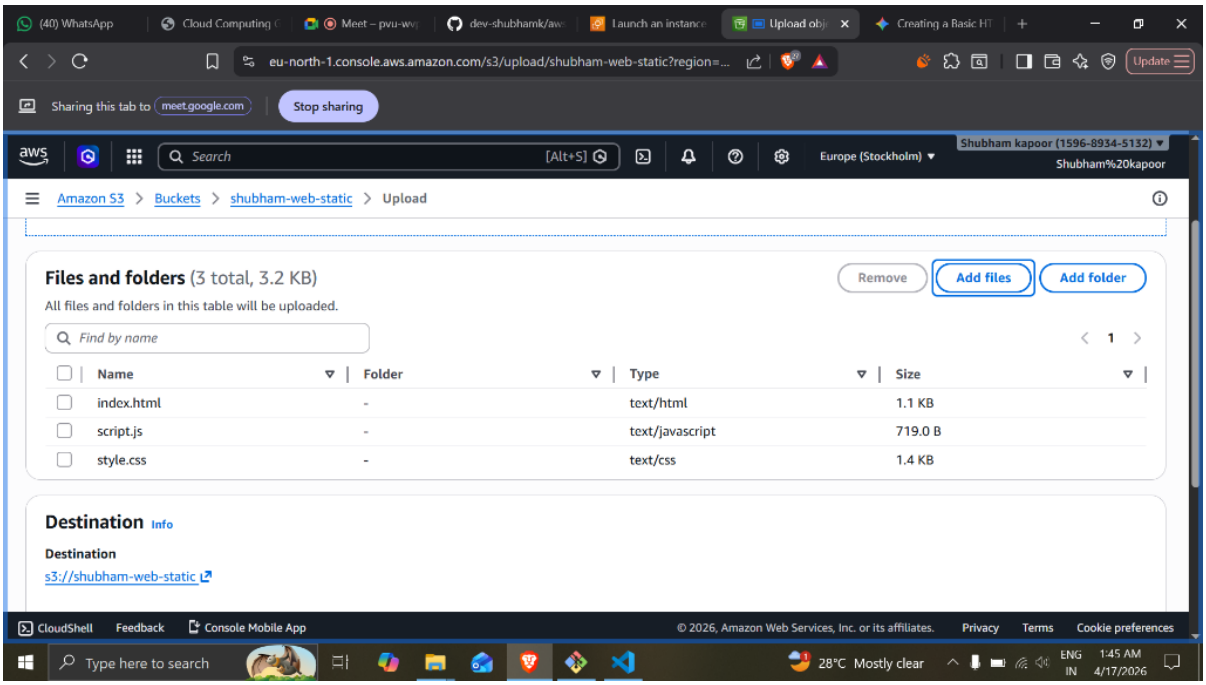
Accessed the bucket properties to prepare for static website hosting settings.

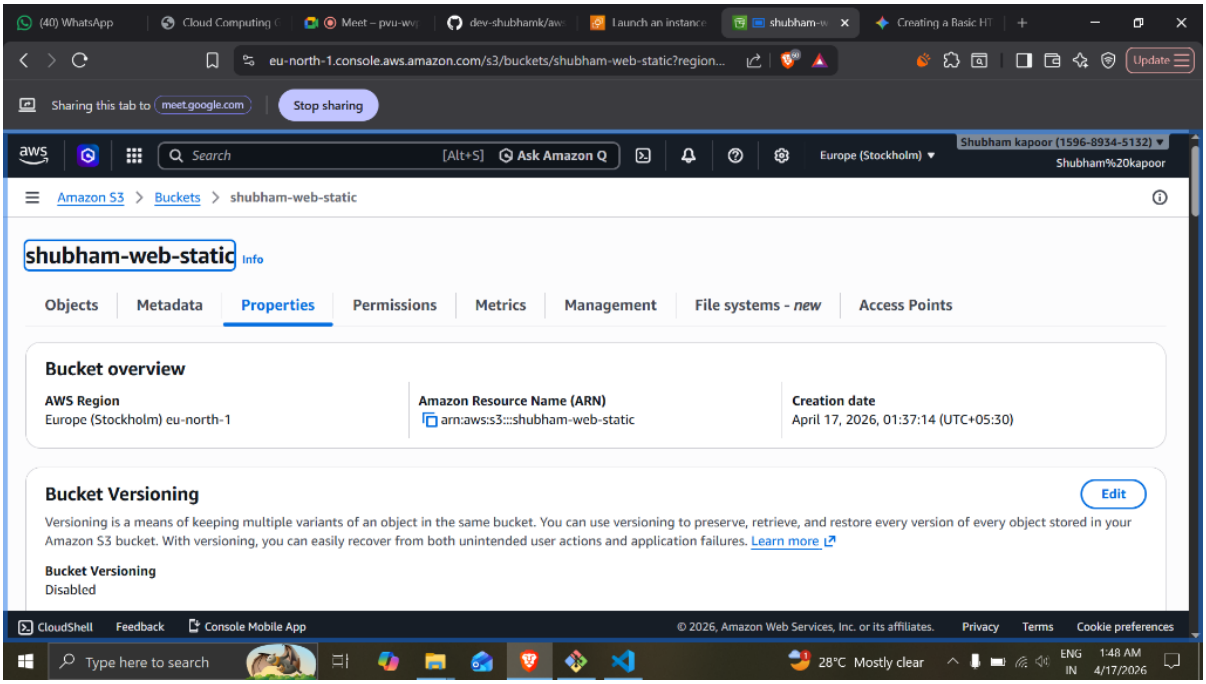


Step 3: Uploading Website Files

Uploaded the website assets including index.html, style.css, and script.js into the bucket.





Step 4: Configuring Public Access Permissions


Modified the "Block public access" settings to allow public access so the static site can be reached from the internet.
